EDUCATION

University Here *Expected December 2026*

Bachelors in Major Here| GPA: 3.10

- Relevant Courses: English, Mathematics, Science, History, Engineering

PROJECTS

Project 1| Languages, and, technologies, used

- Participated in a 4-member team to develop a healthcare web application that tracks surgical procedures and communicates real-time updates to patients' families
- Designed and developed a user-centered interface using Figma, Next.js, and Tailwind CSS to visualize surgical workflows and clarify complex medical information for patients' families
- Built surgical progress displays with Next.js and Tailwind CSS, organizing procedure updates into clear, accessible views for patients' families

Project 2 | Languages, and, technologies, used

- Collaborated in a 4-member team to develop an AI-powered movie recommendation platform that personalizes movie suggestions based on user state of mind and genre preferences
- Developed backend API routing and integrated AI/ML recommendation logic with the TMDb API to retrieve relevant movie suggestions based on user inputs
- Integrated Next.js with a Flask AI recommendation API, processing JSON responses and rendering personalized movie suggestions based on user moods and genres.

WORK EXPERIENCE

Experience 1 *August 2022 - Present*

Student Assistant

- Conduct purchase order data analysis using Microsoft Excel formulas, clarifying procurement reporting and supporting critical department decision-making
- Collaborate with superiors in the creation of e-forms via Smartsheet, aiming to streamline procurement procedure workflows and improve overall customer service
- Revamped department website using Modern Campus CMS V5, ensuring all department services and forms are listed, while enhancing web accessibility and user experience, leading to a 30% increase in user satisfaction

Experience 2 *May 2023 - June 2023 (Seasonal)*

Data Science Researcher

- Engaged in 10+ workshops led by computer science faculty, focusing on intermediate to advanced data science concepts and machine learning techniques and application areas
- Implemented fundamental regression models including decision tree and random forest to analyze and compare over 1 million birth records in the US from 2016-2021, achieving 95% accuracy in predictions and observations

SKILLS

Languages: Python, C++, Javascript/Typescript, SQL

Frontend/Backend Frameworks: NextJS, Tailwind CSS, Svelte/SvelteKit, React

Tools: Git, Github, Node.js, Linux, Vite, Microsoft 365, Smartsheet, Adobe Creative Cloud, Google Workspace
